

## MSG 112B - BLUE FD09 MISSION SUMMARY

1 Sounding like a broken record, but you have continued to crank out some great science, in  
2 addition to working additional tasks that are not timelined. We don't know if you heard, but  
3 Sox was glad to have caught a sighting of your ship and wished you could have visited.  
4 From our perspective, you're losing a horizontal scissors with the Station (too much speed).  
5 We'll try to give you a head's up when good viewing opportunities are available. Keep up  
6 the great work.

7  
8 From the Freestar folks:

9 Your efforts in support of MEIDEX have captured some great images and generated intense  
10 interest in the global scientific community. Keep up the great work! The SOLSE team is  
11 excited for their first ever polar view and hopes to get some great correlative science with  
12 Northern hemisphere observatories. LPT, CVX and SOLCON continue to operate nominally  
13 and collect great science.
